OMEGA SAFETY SYSTEMS, INC. PROVIDES AN *INTERNAL* SOLUTION TO PREVENT GUN VIOLENCE

IDYLLWILD, CA – March 21, 2013 **Omega Safety Systems, Inc., a leading California gunlock manufacturer, has secured more than 400 thousand firearms and provides a superior safety solution for firearm owners and safety advocates.** Omega’s mission is to educate the public about responsible gun ownership and provide a common-sense solution to stop gun violence. Dedicated to increasing child safety and stopping the senseless injury and death cause by improper firearm handling and storage, Omega’s internal gunlocks save lives without compromising Americans’ 2nd Amendment rights: *Keep Your Rights. Keep Them Safe.*

Benefits of the Omega *internal* gunlock include:

- **Ends accidental discharge** – by occupying the chamber, whether locked or not
- **Difficult to defeat** – internal design means stronger locks
- **Simple and easy to use** – if you can load your firearm, you can use our lock
- **Child resistant key for pistols and revolvers**
- **Exceeds all state and federal safety standards** – California DOJ and Maryland approved
- **Gun friendly** – all materials are softer than ammunition brass
- **Does not interfere with the firearm’s handling and or holstering** – chamber specific not gun specific
- **Supplies Browning and Winchester (10 + years)** – who have this to say about the Omega Gunlock: *“You have an excellent product at a very fair price that fills a specific need for us.”*

This gun locking system presents an innovative and affordable firearm safety alternative.

Although outdated trigger and cable locks have been widely available for years – often at no cost to the consumer -- they are rarely used.

The Omega internal gun locking system was designed by a firearm professional for firearm users with the understanding that a “one size fits all” gunlock is an ineffective design. Omega has played an active and continual role in raising the bar for firearm safety devices, with the understanding that gunlocks *only* work when they are used: Firearm owners use and love Omega locks!

Faced with increasing political pressure to stop gun violence, Omega Gunlock is THE solution to keep America safe, protect gun owners 2nd Amendment rights and ensure that the 300 million + firearms currently stored in American homes have the most effective gun locking device on the market available to them for use. In addition, Omega provides manufacturers with a simple solution to upgrade the existing gun locking systems currently provided with their firearms. Evolving legislation and the increased need for standards that exceed minimum requirements make Omega gunlocks the most beneficial choice available for ALL Americans – safety advocates, current gun owners and firearm manufacturers.

Horrific gun-related tragedies have shaken our nation and sent shock waves through Americans everywhere, once again bringing the need for a firearm safety solution to the forefront of American awareness. Omega recognizes this critical task as a multidisciplinary effort that must be executed legislatively. In order to do so, Omega Safety Systems, Inc. welcomes the opportunity to work with local, state and federal governments, law enforcement officers, the CPSC and ASTM to redefine the ineffective firearm safety definitions and standards that are currently being relied upon to keep America “safe.”

In an effort to do so, Omega Safety Systems, Inc. will provide political representatives and firearm manufacturers with samples of the Omega internal gunlock for review and testing. Video demonstration links are also available on the Omega Gunlock website www.omegagunlock.com for: pistols, revolvers, shotguns and rifles.

As the owner, inventor and president of Omega Safety Systems, Inc., Larry Ross has dedicated his life’s work to saving lives and protecting America’s children from preventable firearm injury and death.
